Work Harder, Work Smarter with the PA730 Android Mobile Computer

Introducing the PA730: Get It All Done Faster.

Cypress, California - January 31, 2018 - Run your business in the palm of your hands with Unitech's PA730 mobile computer.

This enterprise-ready mobile computer weighs just 10 oz and is built with a Qualcom Octa-core 64-bit processor for fast and reliable speed.

The PA730 has a fully integrated barcode scanner that reads all 1D and 2D barcodes. Switch from high-resolution scanning to taking high-resolution photos with the device's 16 MP rear camera - the highest in the industry.

Not only can the PA730 handle tough workloads but tough environments are no match for this workhorse. With an IP67 rating, and fitted with a 5" Gorilla Glass® screen, it can handle 6-foot drops to concrete and is fully sealed to protect against Mother Nature's heartiest elements like dust, dirt, and water.

"The PA730 is designed to support a number of wireless connections," said Scott Chung, president of Unitech America, " it has built-in LTE dual antennas, dual WLAN bands, full LTE WWAN bands, and WiFi capability, so you're connected virtually anywhere. Another great feature is the 30 minute hot swappable battery, whatever programs or apps you had on before the swap are still running after the swap."

The PA730 is ideal for a number of applications such as retail, hospitality, asset management, and event ticketing.

Pricing & Availability

The PA730 is available now and priced at $1,619 MSRP. Please contact your sales manager for full details.

Stay tuned for our Verizon Certified PA730, arriving in early 2018!
